

# Meter : RMS

Meter : RMS .....	1
1 Description .....	1
1.1 Pins.....	1
1.2 Parameters .....	1
1.3 Input.....	1
1.4 Output.....	1

## 1 Description

This device calculates the RMS value of the input signal over a sliding time window of period equal to  $1/freq$ .

### 1.1 Pins

This meter has two pins:

<i>pin</i>	<i>type</i>	<i>description</i>	<i>units</i>
in	input pin	input signal	any
out	output pin	RMS over past period	same as in

### 1.2 Parameters

The following parameter must be defined:

<i>parameter</i>	<i>description</i>	<i>units</i>
freq	base frequency of the probed signal	Hz

### 1.3 Input

The input pin may be connected to any control signal.

### 1.4 Output

The value of the output is the RMS value of the input signal over a sliding time window of period equal to  $1/freq$ .

$$out(t) = \sqrt{\frac{1}{period} \cdot \int_{t-period}^t in^2(t) \cdot dt} \quad (1)$$

The calculated value includes the contributions of all harmonics present in the input signal.
