1 Description

This device is an implementation of a general model for turbine and governor HYGOVR. This device is implemented as described in [1]. Implementation details can be viewed by inspecting the subcircuit of this device.

1.1 Pins

This device has 6 pins:

Pin name	Type	Description	Units
Pref	Input	Power reference from load controller LCBF1	pu
Pm_ic	Input	Steady-state mechanical power at $t = 0$, for initialization	pu
w	Input	Mechanical speed	pu
Pe	Input	Electrical power	pu
g_pos	Output	Gate position	pu
Pm	Output	Turbine mechanical power	pu

1.2 Parameters

The default set of parameters are obtained from [1].

1.2.1 Governor tab

The parameters on the Governor tab are:

1. **Permanent droop R**: permanent droop
2. **Time constant T_i** : power feedback time constant
3. **Deadband width db_1** : deadband width of speed governor

4. **Deadband hysteresis E_{RR}** : deadband hysteresis of speed governor
5. **Time constant T_d** : filter time constant
6. **Time constant T_1** : time constant
7. **Time constant T_2** : time constant
8. **Time constant T_3** : time constant
9. **Time constant T_4** : time constant
10. **Time constant T_5** : time constant
11. **Time constant T_6** : time constant
12. **Time constant T_7** : time constant
13. **Time constant T_8** : time constant
14. **Gain K_i** : integral gain
15. **Maximum governor output G_{MAX}** : maximum governor output
16. **Minimum governor output G_{MIN}** : minimum governor output
17. **Time constant T_p** : gate servo time constant
18. **Gain K_G** : gate servo gain
19. **Maximum opening velocity V_{ELop}** : maximum gate opening velocity
20. **Maximum closing velocity V_{ELclo}** : maximum gate closing velocity
21. **Maximum gate opening P_{MAX}** : maximum gate opening
22. **Minimum gate opening P_{MIN}** : minimum gate opening
23. **Deadband width db_2** : deadband width of power gate
24. Feedback switch control: see explanation below.

There are two possible selections for the feedback mode option:

1. Electrical power feedback
2. Gate position feedback

1.2.2 Turbine tab

The turbine tab allows to input:

1. **Time constant T_w** : water inertia time constant
2. **Damping factor D_T** : turbine damping factor
3. **Gain A_T** : turbine gain
4. **No-load flow Q_{NL}** : no-load flow at nominal head

2 Initial conditions

The initial output is equal to the generator mechanical power (base for power) at $t = 0$ s.
